## Synthesis of the seasonal forecast for the period MAM 2024

The analysis of current atmospheric circulation, sea surface temperature, ENSO phenomenon, dynamical and statistical models outputs show for (MAM) 2024

### ❖ Temperature trend

The trend for the season from March to May 2024 shows an increase in temperature compared to normal over all of the country

Forecast	Temperature
INM	***
ECMWF	Above normal
IRI	Above normal
Météo-France	Above normal
C3S multi-system	Above normal
Most likely scenario	Warmer than normal over all of the country

### ❖ Precipitation trend

For precipitation, the models do not indicate clear trends for the MAM 2024 across the country.

Forecast	Precipitation
INM	**
ECMWF	Above normal over the centre No signal elsewhere.
IRI	No signal
Météo-France	Below normal over the all of the country
C3S multi-system	No signal elsewhere.
Most likely scenario	No most likely scenario
